LiftMaster

POWERED BY myQ.

The MAXUM Series is Expanding

LiftMaster® is pioneering the next generation of innovation for commercial door operation. The MAXUM Series of DC commercial door operators are a state-of-the-art platform that introduce next-level versatility in a sleek, purpose-built design that's easier to install and service. With unrivaled performance and intelligence, the expanded lineup will help today's commercial facilities take the next step towards a smarter future.

Selecting the right DC commercial door operator involves considering various factors such as door type, door weight and usage frequency. To help ensure you are selecting the right operator for your application, the following pages provide a step-by-step guide to help you determine the appropriate DC commercial door operator for your facility.

RJDC Jackshaft with Manual Release

Next-generation standard duty Jackshaft (manual release) DC operator supports sectional or rolling doors up to 700 lbs. RJDC operators include a sash chain (manual release) for disconnecting the door from the operator for ease of service or allowing manual door movement. Battery backup capable.

JDC Jackshaft

Next-generation standard duty Jackshaft (non-hoisted) DC operator supports sectional or rolling doors up to 700 lbs. in NEMA 1 applications. Jackshaft operators are preferred over trolleys in applications where overhead space is at a premium. 4.5 Ah battery backup kit is included.

JHDC Hoist

Next-generation standard or extended duty Jackshaft (hoisted) DC operator supports sectional or rolling doors that weigh up to 2200 lbs. in NEMA 1 or NEMA 4X applications. JHDC operators include a hand chain (hoist) for manual door movement. Battery backup capable.

TDC Trolley

Next-generation standard or extended duty TDC operator supports standard-lift sectional doors up to 2200 lbs. in NEMA 1 or NEMA 4X applications. Battery backup capable.

Partner Portal simplifies ordering

LiftMaster has introduced an enhanced ordering process that allows you to simply order what you need à la carte. The Partner Portal not only guides you to the operator that fits your application needs, but it also recommends all the installation components and accessories that are needed for your specific installation, all without you having to know the product numbers. Recommended accessories can be ordered with an operator or placed as a separate stocking order as needed.

Ordering is as easy as 1, 2, 3

Embracing a new approach to ordering an operator on the Partner Portal has never been easier. This guide provides a simple, 3-step process for ordering the DC commercial door operators and accessories based on door specifications, voltage and usage.

Step 1. Select and configure an operator

Step 2. Select required installation components*

Step 3. Select additional accessories and field install kits to improve your operator's installation and functionality

*These vary by operator and application but will be automatically selected for you.

Step 1 **Select and configure an operator**

Configure your choice of MAXUM DC operator in a step-by-step process based on door weight and type, installation voltage/phase and number of daily door cycles. With a trimmed down lineup of operators, the process of ordering and stocking has been significantly simplified.

All MAXUM operators include the CPS-U photoeyes and NEMA 4X units will include the CPS-UN4. These entrapment protection devices are packed in and cannot be swapped out. If additional entrapment devices are needed, they can be ordered/added as an additional accessory in Step 3 of the ordering process.

Step 2 Select required install components

The Partner Portal will automatically select the required installation components based on your selected operator and application.

Required sprocket for RJDC, JDC and JHDC operators

A door sprocket is required for installation of each RJDC, JDC and JHDC operator. See sprocket tables below for suggested sprocket selection.

Additional hoist chain for JHDC units on oversized doors

Determine total hoist chain needed by adding any extra high lift to door height. Doors over 16 ft. in height will need extra hoist chain, as well as sectional doors with high lift that when added exceed 16 ft. of total height.

Amount of additional hoist chain needed for JHDC units on taller doors. Model 1910929FT25	
Total Height (ft.)	Chain packs now come in 25 ft., additional chain packs needed:
0 - 16	0
17 - 29	1
30 - 41	2
42 - 50	3

NOTE: Additional Hoist Chain will be auto-calculated in the Partner Portal based on door height and any extra high lift or vertical lift provided.

Track and chain kit selection for TDC Operators

Determine the right track and chain kit for your TDC operators by measuring your door's height, from bottom to top.

REQUIRED Track and chain kit selection for TDC operators only

1 kit (which consists of 2 tracks, 1 chain, and any needed spacers) is required for installation of each operator, order using the kits listed below.

NOTE: Track and chain will be auto-calculated on the Partner Portal at time of order based on door height and type. Kits for TDC7 operators include #48 chain; kits for TDC12 and TDC22 operators include #41 chain.

Step 3 Select accessories and field kits

Enhance operator functionality and installation with accessories and field kits

LiftMaster has added many features to the MAXUM series that come standard with the operator. For those not included, field installable kits are offered to easily replace current modifications. These kits can be kept on your shelves if needed in a pinch, are easy to install, and reduce the timing to receive modified units.

Safety is a number one priority for commercial door operators. LiftMaster offers a full line of entrapment protection devices for all of your application needs, including new through beam, retro reflective and wireless edge kits.

View the full list of accessories and field kits on the Partner Portal.

Accessories and Field Installable Kits

7 Ah Battery Backup Kit

DC Battery Backup Kit includes two (2) 7 Ah batteries, battery enclosure and connectors.

DC7AH

208V and 600V Transformer Voltage Kits

External transformer kits for converting 120/240V operators to 208V or 600V operator type.

XF208VAC7, XF208VAC12,
XF600VAC7, XF600VAC12

Monitored Wireless Edge Kit

New for commercial door operators, monitored wireless edge kit stops and/or reverses a moving door when sensing a pathway obstruction.

LMWEKITU

Hi-Intensity Red/Green Traffic Light

IP65/NEMA4 all-weather enclosure is an ideal solution for fire stations, auto sales and service centers, municipalities, and parking facilities

RGL-CTL

Auxiliary Relay Board

Use for switching on/off auxiliary devices such as lights, bells, horns, strobes and other warning devices. Board mounts inside the operator cover for easy installation.

AUXREL

3-Button Remote Control

Controls up to three door operators with extended range with Security+2.0®.

893LMMC

Single Button Programmable DIP Remote

811LMX

36 in. Monitored Light Curtain

Provides up to 33 ft. of protection range and a minimum of 36 in. of height coverage to keep your equipment safe.

LC36M

Loop Detector Board

Accessory board to plug-in Loop Detector (LOOPDETL) Board mounts inside the operator cover for easy installation.

Step 3 Select accessories and field kits (continued)

Trolley field install kits

Adding an auxiliary trolley kit to a standard RJDC, JDC or JHDC operator, or dual trolley kit to a standard TDC operator, can provide extra stability for wider and heavier door applications. These added setups will help to improve the overall performance and reliability of the commercial door operator.

Added efficiency through Wi-Fi Connectivity

Your operator now comes with Wi-Fi® as a standard feature. Connecting to Wi-Fi enables free product enhancements and automatic firmware updates. Wi-Fi also gives you access to myQ Facility, a free cloud-based solution that provides a powerful suite of software services, which delivers real-time data and analytics about your facility to your phone. Stay up-to-date and in control, increasing productivity and reducing expenses. Additionally, myQ Enterprise provides a one-stop gate-to-dock performance upgrade that automates and optimizes operations across your facility's inbound and outbound logistics, improving the management, visibility, safety and security of your facility.

For more details on myQ and Wi-Fi connectivity, go to myQ.com/Facility.
